Summary

Results-driven .NET Software Senior Consultant at PwC India with 4+ years of experience building scalable backend systems and enterprise AI solutions. Hands-on expertise in .NET Core, C#, SQL Server, and Microsoft Azure. Proven track record delivering AI-powered applications including an Agentic AI Marketplace, Generative AI document validation, and Microsoft Graph API integrations. Experienced in Agile delivery.

Technical Skills

Languages & Frameworks: C#, .NET Core, ASP.NET, .NET Framework, Python, Node.js, Java 25

Cloud & DevOps: Microsoft Azure, Docker, App Services, Azure Functions, Blob Storage, Azure DevOps, CI/CD, Git, Datadog

Data & Databases: SQL Server, MongoDB, PostgreSQL, Pinecone, CosmosDB

AI & Generative AI: Agentic AI, RAG(Retrieval Augmented Generation), MCP (Model Context Protocol), LLM Integration, Prompt Engineering

Integrations & Platforms: Microsoft Graph API, SharePoint, Microsoft Dynamics 365

AI-Assisted Development: GitHub Copilot, Cursor, Claude

Methodologies: Agile

Experience

Senior Associate

PwC India

July 2022 – Present

Kolkata, West Bengal, India

- Developed a Reporting Service Application for Auditing using SharePoint and Microsoft Graph API, enabling automated data aggregation and report generation across enterprise workloads.
- Developed and maintained scalable backend services using .NET Core and C# for multiple enterprise clients, improving API reliability and performance across production environments.
- Optimized complex SQL Server queries and stored procedures, significantly improving data retrieval performance for high-volume transactional systems.
- Established AI-assisted development best practices for GitHub Copilot, Cursor, and Claude, improving team productivity and code quality across engineering sprints.
- Built an AI-powered Document Validator using OCR and Generative AI to automatically validate documents against configurable business rules, deployed within Microsoft Dynamics 365 for production use.
- Architected an AI Agentic Marketplace enabling enterprise users to build and deploy custom plugins including RAG pipelines, OpenAPI connectors, and MCP servers on scalable cloud infrastructure.
- Delivered enterprise platforms across finance, HR, and immersive learning domains, including a microservices-based Student Finance Management System, a role-based Payroll Management System with SSRS reporting, and Unity 3D-powered virtual collaboration platforms (Metaverse School, Virtual Automobile Showroom, Virtual Amphitheatre).
- Reduced manual effort by up to 50% through Excel-based bulk import workflows and batch report processing, streamlining fee payments, scholarship processing, course transfers, and payroll operations for enterprise clients.
- Integrated AI-powered chatbots, Unity 3D environments, and SQL Server Reporting Services (SSRS) into production .NET/Angular applications, improving user engagement and operational efficiency across five enterprise projects.

Projects

One Audit Platform | .NET Core, Azure, Angular

2025 – Present

- A one-stop auditing platform where users can perform operations on any Engagement and generate reports and configure.
- Implemented the application end to end and Developed the reporting service using Graph API and Sharepoint.

AI Agentic Marketplace | .NET Core, Azure, OpenAPI, RAG

2025 – 2026

- Enterprise platform allowing users to build and deploy custom AI plugins including RAG pipelines and MCP servers.
- Implemented Plan-Based Architecture for structured multi-step agentic prompt execution.

AI Document Validator | OCR, Generative AI, Dynamics 365

2025 – 2026

- Automated document validation against configurable business rules using OCR and LLM integration.
- Deployed in production within Microsoft Dynamics 365 for enterprise clients.

Financial Statements Preparation App .NET, Azure, MS Sharepoint, Angular	2026 – Present
• Built a workflow application for preparing and reviewing financial statements, integrating SharePoint document storage with Angular-based data entry and review screens. • Automated compilation of financial statement data from multiple source systems, reducing manual reconciliation effort for the finance team.	
Student Finance Management System .NET 8, Angular 18, C#, SQL Server, Microservices	Apr 2024 – Oct 2024
• Developed a unified system streamlining fee payments, scholarship processing, course transfers, and financial reporting. • Designed a course transfer workflow across multiple microservices, reducing manual intervention and data-correction effort. • Implemented batch processing for report generation, improving efficiency and cutting report generation time.	
Payroll Management System .NET Framework, Angular 14, C#, SQL Server, SSRS	Oct 2023 – Apr 2024
• Developed a role-based system granting feature and workflow access according to defined roles and permissions. • Implemented Excel-based bulk import for salary revisions, cutting manual effort by 50% and speeding up data processing. • Integrated SQL Server Reporting Services (SSRS) to deliver dynamic payroll and operational reports in-app.	
Virtual Automobile Showroom .NET 8, C#, JavaScript, Unity 3D, SQL Server	Apr 2023 – Jul 2023
• Built a virtual showroom for exploring and interacting with vehicle models in an immersive 3D environment. • Implemented live human-agent interaction for real-time assistance and product queries. • Built a customization environment to modify and visually evaluate car components, including a virtual test-drive experience simulating customized vehicle configurations.	
Virtual Amphitheatre .NET 8, C#, JavaScript, Unity 3D, SQL Server	Dec 2022 – Mar 2023
• Built an interactive virtual conference and collaboration platform for guest and speaker participation. • Implemented role-based experiences for speakers and attendees across virtual meetings and presentations. • Integrated Unity 3D with .NET 8, C#, and SQL Server backend services to create an immersive environment for interactive conferences and collaboration.	
Metaverse School .NET 8, C#, JavaScript, Unity 3D, SQL Server	Oct 2022 – Oct 2023
• Built an interactive virtual school platform for live classes, presentations, and real-time collaborative learning. • Developed backend services for user management, session workflows, and core application functionality. • Integrated an AI-powered chatbot for topic-based Q&A within the virtual learning environment.	

Education

Jadavpur University <i>Bachelor of Engineering – Electrical, Electronics & Communications Engineering</i>	Kolkata, West Bengal, India <i>August 2018 – June 2022</i>
Burdwan Municipal High School <i>Higher Secondary (Class XII)</i>	Burdwan, West Bengal, India <i>2016 – 2018</i>

Certifications

Claude Certified Architect - Professional — Anthropic
Claude Certified Developer - Fundamentals — Anthropic
Claude Certified Associate - Fundamentals — Anthropic
